

Comparison of Super Mineral Water to other mineral products

BACKGROUND and HISTORY

The minerals in Super Mineral Water were discovered by an atomic scientist in Japan while he was researching for a way to remove the radioactive isotopes remaining in the waters around Hiroshima and Nagasaki Japan. It was quite by accident that while taking time off from his research, he came across these minerals while investigating why, a very healthy tree was growing out of a crack in a granite boulder containing black mica and no soil.

He found that the rain water that filled the crack had dissolved some of the black mica which then nourished the seedling in the crack, put there by a bird dropping a seed there as it flew over. The scientist took samples of the water and black mica back to his lab to analyze it. To his surprise, this mineral water did remove radioactive isotopes from water and also contained some of the richest minerals he ever saw. He researched where these minerals came from and discovered they were in streaks of black mica contained in the granite boulders blown out of a volcano. Further research revealed that certain processes deep in the earth, produced a very rich source of concentrated minerals in liquid form that was much more powerful than the mineral water sample he took to his lab, gathered when he investigated the mysterious growing tree. This crystal clear concentrated mineral liquid was created naturally in volcanic regions. In ancient times it was called the “Golden Elixir” due to its beautiful golden color, which alchemists used to try and turn lead into gold. This “Golden Elixir” travels along with the magma and gets spewed into lakes, rivers, aquifers, ponds and other bodies of water resulting in the purification of these water bodies. This process has been going on ever since the earth was created to purify its waters from the

pollution that occurs naturally. Over the last 100 years, man has so polluted this earth that the normal process of keeping our waters pure, is no longer enough. There is simply too much pollution being added to the earth's waters for the naturally occurring "Golden Elixir" to purify.

The scientist says that God and His Angels revealed to him what processes occurred in the earth that produced this "Golden Elixir". He invented and patented a process and machinery where he could reproduce the earth's natural processes and he could thus make this "Golden Elixir" in his lab. He searched 20 years all over the world for the richest source of black mica to use in making this form of very concentrated minerals. It turned out that the richest form was found right in his own "back yard."

When the Chernobyl disaster occurred, the Russian government had this scientist bring his concentrated minerals to Russia to help clean up the radioactive waters contaminated there. These minerals did such a good job of doing this, he was offered \$400,000,000.00 for the exclusive rights to his patents. He turned them down because he believes God gave him the secrets of making this miraculous mineral product for all human beings on this planet, not to be controlled by one country. Russia, China and other countries tried to reverse engineer the making of these minerals, but no one has been successful in doing so. These minerals will help all forms of life on this planet, humans, plants and animals. I have many instances of where these life forms have benefited greatly.

The first Medical Doctor, a cancer surgeon, who was given these minerals by the scientist, was asked to see what results would be obtained by giving them to his patients. This doctor, Hisatake Nojima, M.D., wrote a book, "Mineral deficiency and illnesses!" where he claims "Mineral deficiency has been the cause of all of these modern day diseases and life style illnesses!!" In his book, he tells how he was able to help over 50,000 cancer patients achieve complete remission from their cancer disease by using a protocol developed using these "Super Mineral Water" trace minerals. He also states, "... the chief cause of diseases such as cancer, diabetes, stroke, cardiac infraction, atopy, hay fever, etc. was from the deficiency of minerals called trace minerals. "Also, "...that many of the world's current population lack these trace minerals, which are in fact necessary for maintaining a healthy body, and therefore 'are' suffering from a form of malnutrition." It is very hard for the medical community to believe and understand how the same protocol of using these minerals will permit the body to heal itself of so many different illnesses as compared to traditional medicine requiring specific drugs for each different illness. It is our belief that it is not the minerals which do the actual healing, but rather it is the body itself which does the

healing by its own immune system which is restored due to the actions of the trace minerals in our bodies.

OTHER PRODUCT COMPARISONS

There are lots of products being marketed as minerals. Not very many are truly bio-available ionic trace minerals as ours are. Dr. Nijima likes to call our minerals “Super Mineral Water” as well as “gene minerals”. This is because every gene in our body requires its own specific trace mineral in order to function properly. Since we don’t get good quality trace minerals from the food we eat anymore, our bodies become malnourished from the lack of necessary minerals. A malnourished body is one that can more easily become diseased or ill. We now have to take matters into our own hands to make sure we get the proper trace minerals needed for our health.

Some mineral products are made from finely grinding up mineral rocks and passing them off as healthy minerals. These are not bio-available and cannot be absorbed by our body. They simply pass right on through our body and do not provide any benefit to us at all. Other mineral products may contain some bio-available trace minerals, but the quality may be inferior and may contain fewer variety of minerals. Our trace minerals contain 80 or more trace minerals of the highest quality. They are in liquid form making it easier to be absorbed by our body. A human double blind placebo clinical study was conducted which showed that water treated with our minerals had a 32% cellular hydration compared to the same water, without having our minerals added, only had a 3% cellular hydration. As a comparison, Gator-Aide has an 8% cellular hydration rate. It was also proven that water with our minerals added, were absorbed into the body from 2 ½ to 4 times faster than water without our minerals. The reason for this is because water with our minerals added becomes structured water. Regular water is made up of lots of H₂O molecules connected together in either long strings or clusters of molecules connected together. When our minerals are added to regular water, these long strings or large clusters of molecules are broken up into small groups of just 6 H₂O molecules connected in a hexagonal, 6 sided shape. It is much easier for a small 6 sided molecular structure to enter the body than for a large 24, 32 or more molecular structure to do so. I know of no other mineral product that can transform regular water into structured water (also called hexagonal water). When this structuring takes place, toxins stored in liquid form inside these large clusters or strings of H₂O molecules, are released from containment. Due to the minerals added to the water along with the oxygen created in the mineralized water, an agglutination process takes place on the released toxins and they solidify into tiny specs. These specs then come together to form larger specs in a process called flocculation. Now a

chemical change takes place causing these larger specs to “burn up” and fall to the bottom in the form of ashes, which are now completely inert, no longer harmful to the human body. The same process which happens to water outside the body, also happens inside the body when this mineralized water is swallowed. Thus, our drinking water is purified and our bodies are detoxed by this same structured water. I know of no other mineral product that can do what our mineral product can do. Drinking this structured water also causes our bodies to increase its conductivity so electrical communication that takes place within our bodies is much better.

Another benefit of our minerals is how they work with our digestive processes. Many products have jumped on the alkaline bandwagon saying that since our body is alkaline, we should drink alkaline water and minerals. The gastric acid in our stomachs has a pH somewhere between 1.0 and 5.0 which is necessary in order to digest our food. Drinking high alkaline water or minerals can raise the pH level in our stomach to above the 5.0 level which can cause digestive problems leading to serious health issues. One of the doctors in Detroit had a TV show where she talked about how important it was for people to buy her alkaline water so they would not get cancer. She had a water store where she sold over \$1,000,000 of her alkaline water each year. She died of cancer and lost all credibility. That water store now sells our mineral water. When our minerals are mixed 1 teaspoon to a gallon of water, the resulting pH is 6.8, which does not interfere with the pH of our gastric acid. Alkaline products have a pH of 7.8, 8.2, 9.0 or even higher. These higher pH values can definitely interfere with the gastric acid’s ability to properly digest our food, resulting in potential gastric intestinal problems.

I have recently learned about another mineral product that I would be interested in learning more about. It comes from a 1500 meter deep well in Africa where water containing minerals comes out of the well at a temperature of 70 degrees centigrade (158F). It has a pH of 7.8 and contains what appears to be bio-available minerals. My concern about this product is that there may be no control about which minerals, or what other potential contaminants may be contained in it. This product comes from natural processes taking place deep in the earth, which resembles what we have duplicated with our product in the lab. We control the mineral quality used in making our product where I don’t know about the quality control exercised with this other product. Also, we have no idea what other potential contaminants may be contained in that large aquifer being tapped. How much does the composition of that water change over time or even from day to day? Before endorsing this product as a viable product, I would need satisfactory answers to these questions.

Our goal is to be able to reproduce the manufacturing of our trace mineral product in different locations around the world. The Atomic scientist has told us he would help us in this goal. When we first brought these minerals to the USA, we attempted to do that at our location. We were successful in making a mineral product, but it was inferior to the original product. It turned out that the quality of the black mica was not as good as what is used at the manufacturing facility making the concentrated minerals. Even though black mica is found all over the world, there are various grades of quality. That is why the scientist searched 20 years to find the very highest quality. He believes as we do, that this same high grade black mica can be found elsewhere, but the task is to locate it.

FUTURE PLANS

It is our goal to provide these life giving trace minerals to people all over the world at a very affordable price, so as many people as possible can participate in the blessings of their healing usages. Our goal is not to make as much money as we can, but to change as many lives as possible by giving access to these life changing minerals. We agree with the scientist, that the secrets of these minerals were a gift from God to all mankind and to all life (plants and animals) as well. Good clean, quality water is essential to all life. We want to help provide that to the greatest extent possible.

This document was not written to put down any other product. We wish every other product manufacturer the very best in their attempts to provide humanity with the best products possible. Because we have been blessed with this knowledge, we feel it is our responsibility to pass it on to others, to share the blessings we have received. As a result, we believe the world can, and will, become a better place.
